The iPortfolio: an online space enabling student and peer assessment of Graduate Attribute achievement

The iPortfolio is an online space designed to enable students to perform a range of self-directed learning tasks including self-assessment of their achievement of Curtin’s Graduate Attributes, sharing works-in-progress, getting feedback from peers, and showcasing achievements with others within and beyond Curtin.

The Graduate Attributes are used to ‘tag’ evidence (text, image, video and so on) uploaded to the iPortfolio. The size of the font used in Tag Cloud reflects the extent to which a student has uploaded evidence in that category.

Students rate their achievement (using the five star rating scale) and provide a justification for their rating. They can also invite peers and mentors, including teaching staff and employers, to rate them.

Students will be able to see how their ratings compare with feedback and ratings by peers and mentors.

**Challenges**
1. Building and implementing a new system
2. Conducting the pilot (underway now)
3. Ongoing student and staff buy-in
